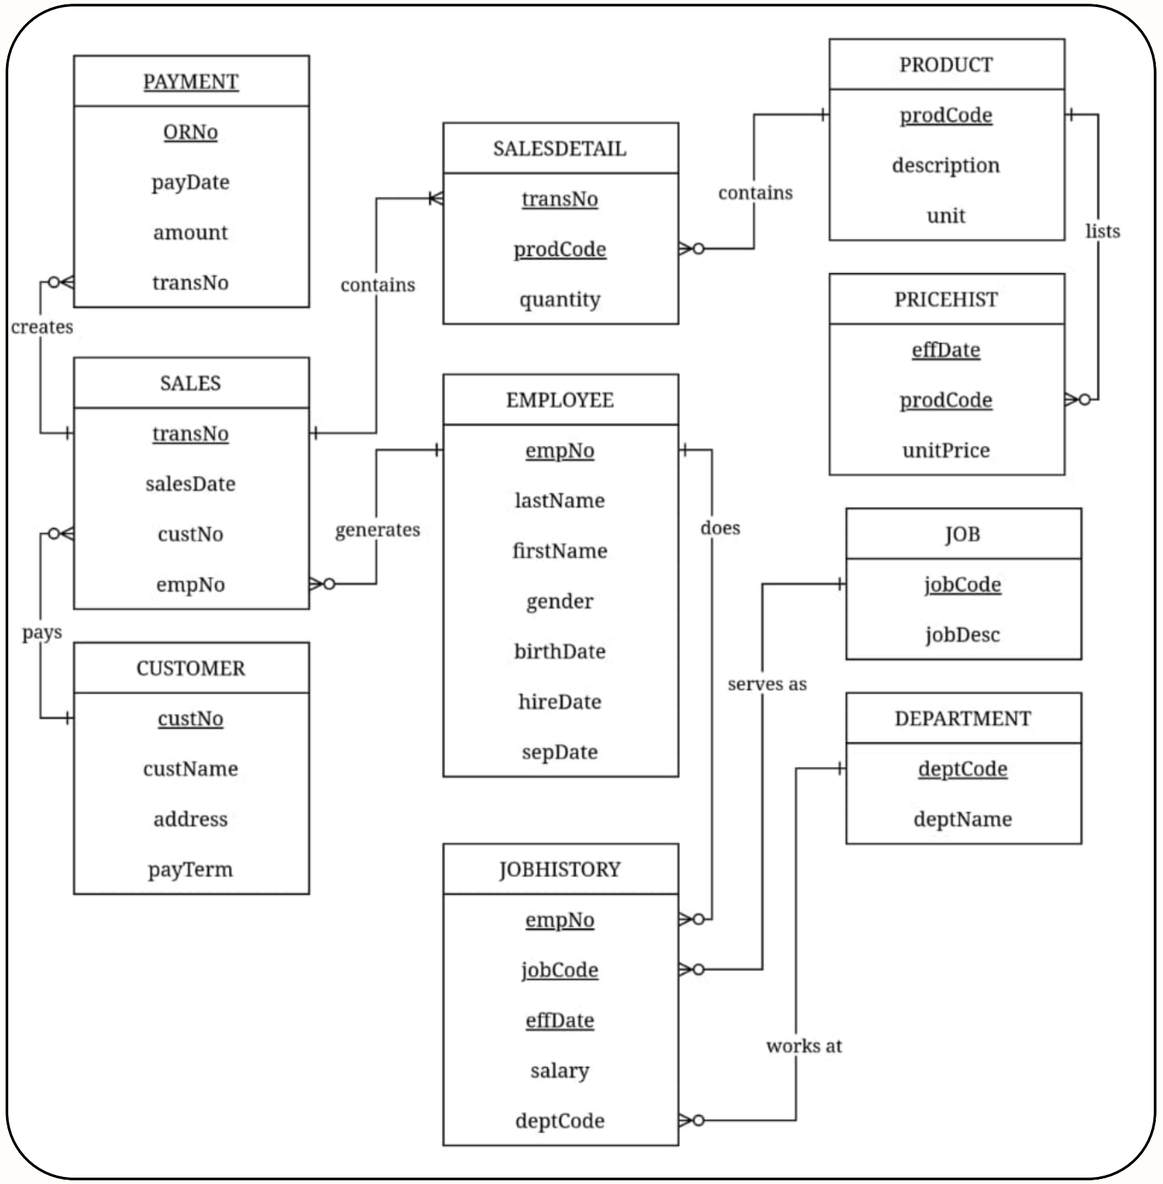
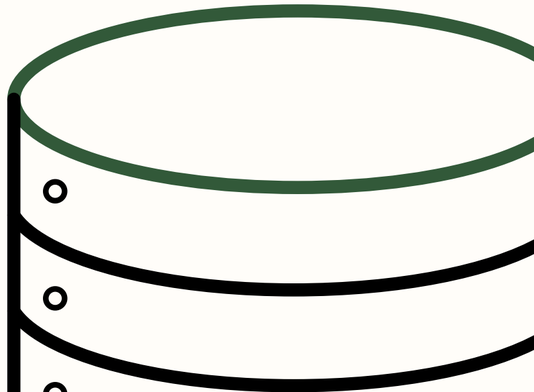
Overview

HOPE-SMS is a web-application made to streamline sales transactions, while enforcing strict data management and access governance

Objective: To provide a centralized platform for managing sales, customers, and employees, with a real-time analytics reporting
Automated Pricing: Features a pricing logic that fetches unit prices from price listing to prevent manual entry erros
Data Integrity: Implements a “Soft-Delete” policy to transactions and line items, using ACTIVE/INACTIVE toggle
Security: Driven by a granular 13-point Rights Matrix and Supabase Row Level Security (RLS) to protect sensitive business data in a production environment.

Table Architecture





Rights Matrix

Rights (Permissions)	Superadmin	Admin	User
(SALES_VIEW) View Transactions	✅ Allowed	✅ Allowed	✅ Allowed
(SALES_ADD) Create Transaction	✅ Allowed	✅ Allowed	❌ Blocked
(SALES_EDIT Edit Transactions	✅ Allowed	✅ Allowed	❌ Blocked
(SALES_DEL) Soft-Delete Transactions	✅ Allowed	❌ Blocked	❌ Blocked
(SD_VIEW) View Sales Details	✅ Allowed	✅ Allowed	✅ Allowed
(SD_ADD) Add Line Items	✅ Allowed	✅ Allowed	❌ Blocked
(SD_EDIT) Edit Line Items	✅ Allowed	✅ Allowed	❌ Blocked
(SD_DEL) Soft Delete Line Items	✅ Allowed	❌ Blocked	❌ Blocked
(CUST_LOOKUP) Look Up Customer	👁️ Lookup	👁️ Lookup	👁️ Lookup
(EMP_LOOKUP) Look Up Employee	👁️ Lookup	👁️ Lookup	👁️ Lookup
(PROD_LOOKUP) Look Up Products	👁️ Lookup	👁️ Lookup	👁️ Lookup
(PRICE_LOOKUP) Price History	👁️ Lookup	👁️ Lookup	👁️ Lookup
(ADM_USER) Manage Users	✅ Allowed	✅ Manage USERS only	❌ Blocked

Lessons Learned

- **Challenges of State Synchronization:** Implementing Cascade Logic taught us that deactivating a parent record (Sales) requires a robust synchronization strategy to ensure child records (SalesDetail) follow the same governance state without causing data drift.

- **Granular vs. Generic Permissions**: We learned that mapping access to 13 specific functional rights is far superior to using generic role labels. This granularity allows for precise auditing and prevents "privilege creep" within the organization.

- **Temporal Data Management:** Separating the priceHist table from the products table was vital. This taught us how to handle time-sensitive data, ensuring that historical sales reflect the price at the time of purchase, even if current inventory prices change.

- **Fail-Safe Governance Guard**s: Implementing the "Superadmin Protection" guard (preventing Admins from disabling the system owner) highlighted the necessity of "hard-coded" safety nets to prevent accidental or malicious system lockouts.

Thank you!
